

# **Course 18.327 and 1.130 Wavelets and Filter Banks**

**Matlab wavelet toolbox.**

## **Matlab Example 3**

**1. 1-D signal analysis**

MATLAB M-file

2

## Daubechies 9/7 pair: zeros of $H_0$ and $F_0$

```
>> example3
Zeros of H0(z)
ans =

    2.0311 + 1.7390i
    2.0311 - 1.7390i
   -1.0001 + 0.0001i
   -1.0001 - 0.0001i
   -0.9999 + 0.0001i
   -0.9999 - 0.0001i
    0.2841 + 0.2432i
    0.2841 - 0.2432i

Zeros of F0(z)
ans =

    3.0407
   -1.0010 + 0.0010i
   -1.0010 - 0.0010i
   -0.9990 + 0.0010i
   -0.9990 - 0.0010i
    0.3289
```

3

## Complete Set of Daub 9/7 Filters

4

# Frequency Responses of Daub 9/7

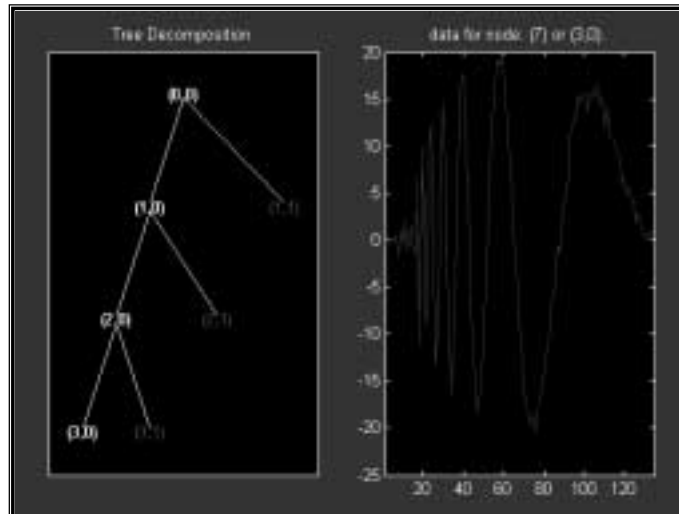

5

# Single Stage Decomposition

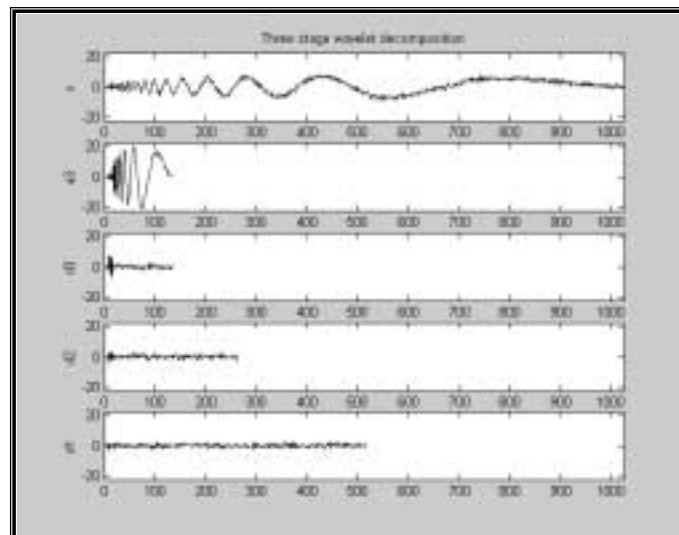

6

## 3-Stage Decomposition

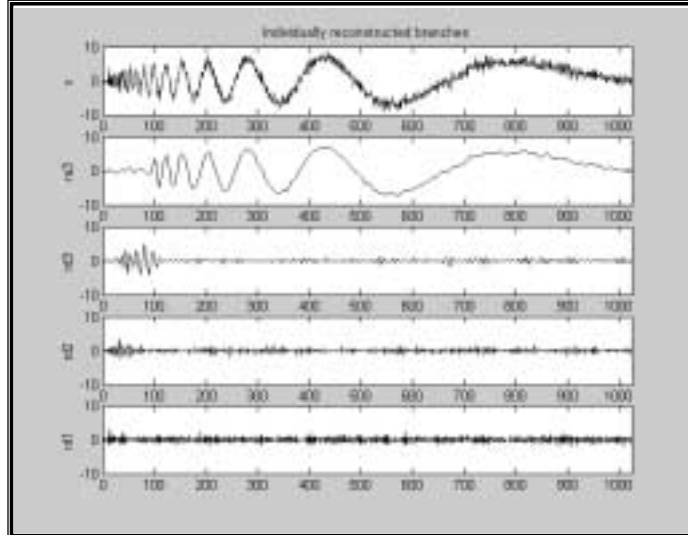

7

## 3-Stage Decomposition

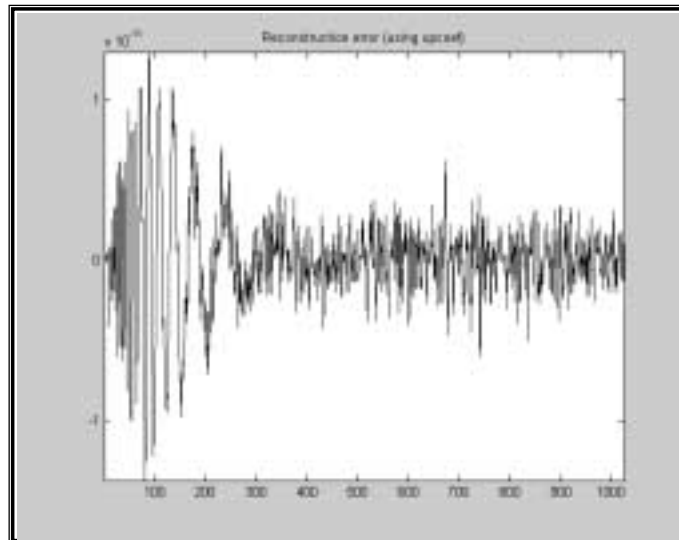

8

## Individually Reconstructed Branches

9

## Reconstruction Error --- upcoef

10

## Reconstruction Error --- wrcoef

11

## Reconstruction Error --- waverec

12

# Matlab Example 4

## 1. 2-D image analysis

MATLAB M-file

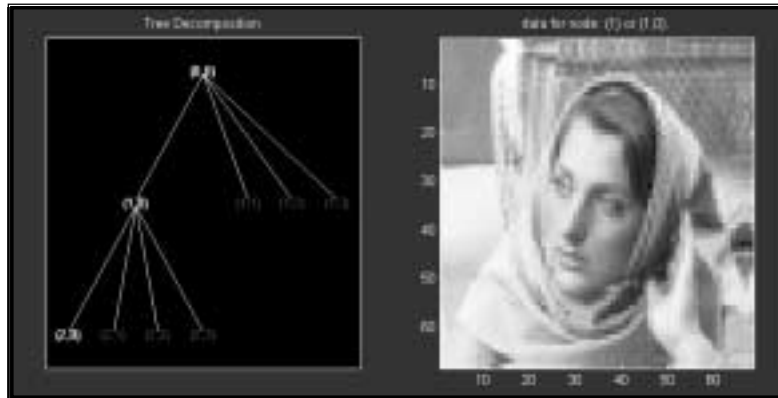

13

## Original Image

14

# Wavelet Decomposition

15

# Single Stage Decomposition

16

## Two-Stage Decomposition

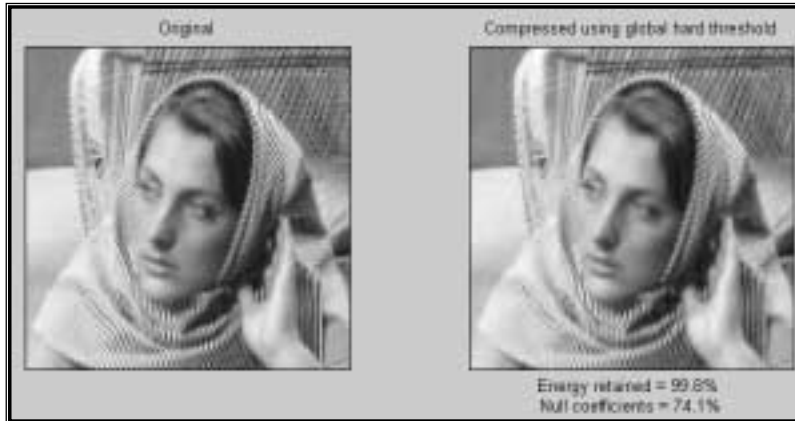

17

## Reconstructed Branches

18

## Global Hard Thresholding

19

## Variable Hard Thresholding

20
