

# Introduction to the American Political Process

## Class 19: Polarization

---

Asya Magazinnik (Professor)

## 1. Reading

McCarty, “Polarization: What Everyone Needs to Know”

# Reading

---

**Polarization:** the increasing support for extreme political views relative to the support for centrist or moderate views

**Partisanship:** a strong bias in favor of one's party and strong dislike or prejudice against other parties

McCarty, Nolan. In *Polarization: What Everyone Needs to Know*. Oxford University Press, 2019. © Oxford University Press. All rights reserved. This content is excluded from our Creative Commons license. For more information, see <https://ocw.mit.edu/help/faq-fair-use/>.

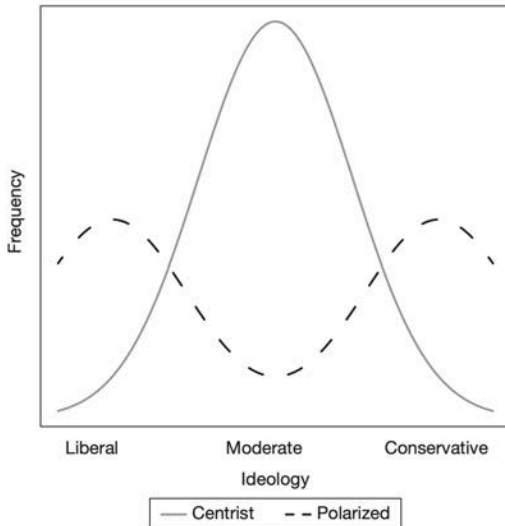

# Polarization

Example: Abortion

1 = abortion is legal in all circumstances; 2 = abortion legal in some cases and restricted in others; 3 = complete ban on abortion

# Polarization

Note that this definition has nothing to do with partisan attachment.

## Mass vs. elite polarization

- **Mass:** voters and citizens
- **Elite:** Officeholders, donors, activists, public intellectuals, party officials...

Note that mass and elite opinion do not always move in tandem:

- Abortion: mass more moderate
- Vietnam: mass stopped supporting war before elites

**Partisan divergence:** The distance from the median/average Democrat to the median/average Republican

There are two possible causes of partisan divergence:

1. Polarization
2. Partisan sorting

# Is polarization bad?

Arguments in favor of some polarization:

1. Consensus may mean representation failure
2. “Responsible Party Theory”: distinct choices are good for democracy

But near universal agreement that current levels are too high.

McCarty, Nolan. In *Polarization: What Everyone Needs to Know*. Oxford University Press, 2019. © Oxford University Press. All rights reserved. This content is excluded from our Creative Commons license. For more information, see <https://ocw.mit.edu/help/faq-fair-use/>.

# Are elites polarized?

**Figure 3.3: Party Positions in the US House 1877–2014** Figure shows average DW-NOMINATE scores by party.

# Is the public polarized?

- No evidence that average policy views have become more extreme since 1970
- Individuals *are* better sorted into parties (more ideological constraint) (Fiorina)
  - Suggests that elite polarization came first
- *But* evidence that more politically engaged publics are more polarized (Abramowitz)
  - Suggests that mass polarization could have come first

# What is the nature of mass partisan sorting?

## 1. Ideology-driven sorting

- E.g. a conservative Democrat changes party label to Republican

## 2. Party-driven sorting

- E.g. a conservative Democrat changes his policy views to more liberal ones

Empirical evidence:

- Same voters interviewed in 1992, 1994, 1996
- Those who sorted were mostly **party-driven**, with two important exceptions:
  - Abortion
  - Southern Democrats

# What issues has the public sorted on?

1. **Social welfare issues:** support for government spending and government health insurance, tax rates
  - From 1972-2000, no evidence of increased divergence over time; parties were divergent and remain divergent
2. **Cultural issues:** Abortion, sexuality, gender roles, drug legalization
  - Significant sorting over time: no divergence in 1972 and significant divergence now
3. **Racial issues:** Support for civil rights, racial equality, integration, fair housing, affirmative action
  - Some divergence in 1972 and more divergence now

**Conflict extension:** The *number* of issues where parties have staked a clear position is growing.

# Causes of polarization

By “cause” we mean that without  $X$ , there would be no  $Y$ . Understood in two ways:

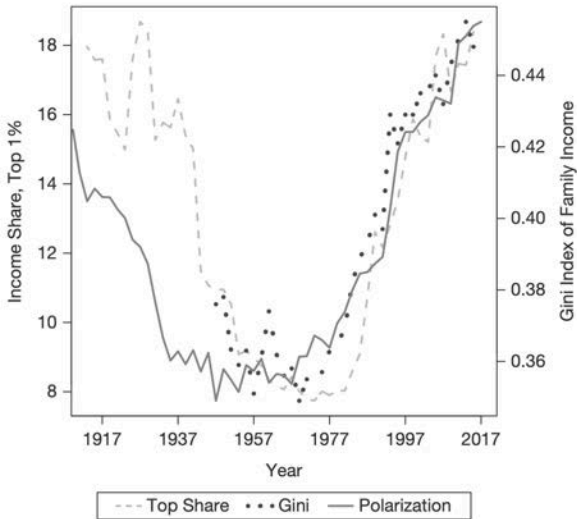

1. An initial cause: without  $X$ , polarization would never have occurred
2. A precipitating factor:  $X$  caused polarization, but  $Z$  made it worse than it would have been otherwise

McCarty, Nolan. In *Polarization: What Everyone Needs to Know*. Oxford University Press, 2019. © Oxford University Press. All rights reserved. This content is excluded from our Creative Commons license. For more information, see <https://ocw.mit.edu/help/faq-fair-use/>.

1. Southern Realignment
2. Economic inequality

# Precipitating factors

## 1. Extreme leaders

## 2. The media

- Selective exposure
- Persuasion
- Disengagement of less political viewers

## 3. Social media

- “Echo chamber” effect may be overstated: most people get news from moderate sources
