

Do you long for a summer free from hay fever?

We're inviting hay fever sufferers aged 18 - 65 to take part in the **PollenLITE** clinical research trial and test a new kind of vaccine that could actually 'switch off' the allergic reaction to grass pollen.

Hay fever medications will be supplied free of charge during the summer of 2013. Travel expenses will be reimbursed.

Do something positive, with PollenLITE.

Thank you for your interest in the PollenLITE study. Registration has now closed. Everyone who registered on the website will be contacted over the next month.

* This trial is supported by the Medical Research Council and the National Institute for Health Research. In this trial, half of participants will receive the active vaccine and half will receive a dummy vaccine.
