* Low precision; no estimate reported.

PUF = public use file, which refers to estimates produced from a NSDUH public use file (a PUF is a NSDUH restricted-use file that has undergone statistical disclosure limitation treatment); RUF = restricted-use file, which refers to estimates produced from a NSDUH RUF and published in NSDUH's mental health detailed tables available at <http://www.samhsa.gov/data/>; SE = standard error that is associated with the estimate.

NOTE: $Ratio\ of\ estimates = PUF\ estimate \div RUF\ estimate$; $Ratio\ of\ SEs = PUF\ SE \div RUF\ SE$.

NOTE: Serious Mental Illness (SMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). SMI includes individuals with diagnoses resulting in serious functional impairment. These mental illness estimates are based on a predictive model and are not direct measures of diagnostic status. For details on the methodology, see Section B.4.3 in Appendix B of the *Results from the 2013 National Survey on Drug Use and Health: Mental Health Findings*.

¹ The Other Employment category includes students, individuals keeping house or caring for children full time, retired or disabled individuals, or others not in the labor force.
