## Pooled individual patient data RCTs risk of bias assessment: Fibromyalgia subgroup studies

| Study Inputs  |  |  |
|---|--|--|
| Overall risk of bias summary – input study #1   |  |  |
| Overall risk of bias summary – input study #2   |  |  |
| Overall risk of bias summary – input study #3   |  |  |
| Overall risk of bias summary – input study #4   |  |  |
| Considerations for subgroup interaction in IPD pooled RCT analysis                        |  |  |
| Did authors consider inclusion of "across-trial"  |  |  |
| information? [Fisher, 2011]   |  |  |
| Analytic technique selected, ordered from most to least                                   |  |  |
| optimal:[Fisher, 2011]  |  |  |
| 1. OSM: "one-stage" model with covariate interaction (do                                  |  |  |
| authors include a term for trial membership, if this                                      |  |  |
| method was chosen?)   |  |  |
| 2. PWT: pooling of within-trial covariate interaction                                     |  |  |
| 3. CWA: "manually" combining separately calculated  |  |  |
| within- and across-trial effects  |  |  |
| 4. TCDS: testing for treatment effect differences across                                  |  |  |
| covariate subgroups   |  |  |
| Was heterogeneity in interaction effects discussed?                                       |  |  |
| (E.g., large $\tilde{l}$ or obvious outlier, or confounding)                              |  |  |
| Optimal presentation: were results of interaction effect                                  |  |  |
| presented graphically for reader to see (similar to "default                              |  |  |
| presentation style" suggested by Fisher 2011[Fisher,                                      |  |  |
| 2011 #4632])?   |  |  |
| Risk of analytic bias based on IPD method for pooled                                      | [Low, Unclear, High]                         |  |
| analysis:   |  |  |
| Reporting Bias- p   | ooled IPD analysis                           |  |
| Were all outcomes reported in Results or were only  |  |  |
| select outcomes reported? (compare to methods section)                                    |  |  |
| Were results (in tables and/or text) reported for all                                     |  |  |
| randomized patients   |  |  |
| -for main outcomes?   |  |  |
| -for all outcomes?  |  |  |
| -for subgroups?   |  |  |
| What is the risk of reporting bias due to selective                                       | [Low, Unclear, High]                         |  |
| outcome reporting in pooled analysis?   |  |  |
| Additional subgroup items- pooled IPD analysis (adapted from Sun et al.[Sun, 2010 #4677]) |  |  |
| Were subgroups pre-specified (a priori in RCTs) or only                                   |  |  |
| for pooled analysis?  |  |  |
| Was direction of subgroup effect on each/main outcome                                     |  |  |
| specified a priori? If so, was result consistent with it?                                 |  |  |
| Is subgroup effect significant?   | S-M-B vs NR -or text of "NS"                 |  |
| (Skeptical: p>0.01 vs Maybe (0.01 <p<0.1) p<0.001<="" td="" vs=""><td></td></p<0.1)>      |  |  |
| Believable)   |  |  |
| Is subgroup effect large?   |  |  |
| Is subgroup effect independent? (is another interaction                                   |  |  |
| significant for a related variable?)  |  |  |
| Is the interaction effect consistent across similar                                       |  |  |
| outcomes in the study?  |  |  |
| Risk of Bias Assessment for pooled IPD methods  | [Low, Moderate or High] and brief rationale  |  |
| and reporting   | (transfer to bottom of this assessment form) |  |

| RCT inputs for  | pooled analysis       |  |
|---|-----------------------|--|
| Selection Bias-input RCTs                                 |                       |  |
| Was method of randomization used to generate the          |                       |  |
| sequence described in sufficient detail to assess whether |                       |  |
| it should produce comparable groups? (inadequate          |                       |  |
| randomization)?   |                       |  |
| Were all randomized participants analyzed in the group    |                       |  |
| to which they were allocated? (Intention to treat (ITT))  |                       |  |
| Were the groups similar at baseline regarding the most    |                       |  |
| important prognostic indicators?                          |                       |  |
| Was method of treatment allocation adequate to keep       |                       |  |
| treatment concealed until desired time?(inadequate        |                       |  |
| allocation concealment)                                   |                       |  |
| Risk of selection bias (inadequate randomization or       | [low Unclear High]    |  |
| allocation concealment):                                  |                       |  |
| Berformance B   | lias-innut PCTs       |  |
| Was the ears provider blinded to the intervention?        |                       |  |
| Was the participants blinded to the intervention?         |                       |  |
| Need to the intervention?                                 | res, no, NR           |  |
| Nondrug interventions: Were interventions adequately      |                       |  |
| defined so they could be replicated?                      |                       |  |
| Was the intended blinding effective?                      |                       |  |
| Risk of performance bias due to lack of participant       | [Low, Unclear, High]  |  |
| and personnel blinding, intervention definition &         |                       |  |
| fidelity to treatment?                                    |                       |  |
| Detection Bia   | as-input RCTs         |  |
| Were the outcome assessors blinded to the intervention?   | Yes, no, NR, NA       |  |
| Was the scale/tool used to measure outcomes validated,    |                       |  |
| reliable?   |                       |  |
| Were co-interventions avoided?                            |                       |  |
| Was the timing of the outcome assessment similar in all   |                       |  |
| groups?   |                       |  |
| Were significance estimates for results appropriately     |                       |  |
| corrected for multiple comparisons?                       |                       |  |
| Was study adequately powered –                            |                       |  |
| To detect main effects?                                   |                       |  |
| To detect differences in subgroups?                       |                       |  |
| Risk of detection bias due to lack of outcome             | [Low, Unclear, High]  |  |
| assessor blinding, measurement of outcomes,               |                       |  |
| statistical analysis, low study power                     |                       |  |
| Attrition Bia   | s-input RCTs          |  |
| Was attrition lower than 20%?                             | Y, N, NR, NR for SG % |  |
| -overall  |                       |  |
| -in subgroups   |                       |  |
| Were reasons for incomplete/missing data adequately       |                       |  |
| explained?  |                       |  |
| -# assessed, -# dropped out, # lost to follow-up, # died  |                       |  |
| Were losses to follow-up also reported for subgroups?     |                       |  |
| Incomplete data handled appropriately?                    |                       |  |
| Risk of attrition bias due to amount, nature, or          | [low Unclear High]    |  |
| handling of incomplete outcome data?                      |                       |  |
| Reporting Bia   | as-input RCTs         |  |
| Were all outcomes reported in Results or were only        |                       |  |
| select outcomes reported (compared to methods             |                       |  |
| section)?   |                       |  |
| Were results (in tables and/or text) reported for all     |                       |  |
| randomized natients (vs. only treatment completers)       |                       |  |
| -for main outcomes?                                       |                       |  |
| -for all outcomes?  |                       |  |
| -for subaroups?   |                       |  |
| What is the risk of reporting hias due to selective       | [low Unclear High]    |  |
| outcome reporting?  |                       |  |

| Other Sources of Bias   |   |  |
|---|---|--|
| Are there other risks of bias? If yes, describe   |   |  |
| Additional subgroup items-input RCTs  |   |  |
| Was subgroup variable measured at baseline or after   |   |  |
| randomization?  |   |  |
| Were subgroups pre-specified (a priori)?  |   |  |
| Was direction of subgroup effect on each/main outcome   |   |  |
| specified a priori? If so, was result consistent with it?                                     |   |  |
| Is subgroup effect significant? Skeptical: p>0.01 vs  | S-M-B vs NR -or text of "NS"                            |  |
| Maybe (0.01 <p<0.1) 2010<="" [sun,="" believable="" p<0.001="" td="" vs=""><td></td></p<0.1)> |   |  |
| #4677]  |   |  |
| Is subgroup effect large?   |   |  |
| Is subgroup effect independent?   |   |  |
| Is the interaction effect consistent across similar   |   |  |
| outcomes in the study?  |   |  |
| Risk of Bias Assessment for <u>RCT inputs</u> (by   | [Low, Moderate or High] and explanation (1-2 sentences) |  |
| outcome)  |   |  |
| Risk of Bias Assessment for pooled IPD methods  | [Low, Moderate or High] and explanation (1-2 sentences) |  |
| and reporting (from above)  |   |  |
| Overall Risk of Bias Assessment   | [Low, Moderate or High] and brief explanation           |  |
| (by outcome)  |   |  |

**Abbreviations:** CWA: manually-combining separately calculated within- and across-trial effects; OSM: One-stage model with covariate interaction; PWT: pooling of within-trial covariate interactions; RCT: randomized clinical trial; TCDS: Testing for treatment effect differences across covariate subgroups
