

Brentuximab Vedotin

Revised: December 3, 2018.

CASRN: 914088-09-8

Drug Levels and Effects

Summary of Use during Lactation

No information is available on the clinical use of brentuximab during breastfeeding. Because brentuximab is a large protein molecule with a molecular weight of about 153,000, the amount in milk is likely to be very low and absorption is unlikely because it is probably destroyed in the infant's gastrointestinal tract. Until more data become available, brentuximab vedotin should be used with caution during breastfeeding, especially while nursing a newborn or preterm infant. The manufacturer recommends that breastfeeding be discontinued during brentuximab therapy.

Drug Levels

Maternal Levels. Relevant published information was not found as of the revision date.

Infant Levels. Relevant published information was not found as of the revision date.

Effects in Breastfed Infants

Relevant published information was not found as of the revision date.

Effects on Lactation and Breastmilk
