

Abciximab

Revised: June 3, 2019.

CASRN: 143653-53-6

Drug Levels and Effects

Summary of Use during Lactation

No information is available on the clinical use of abciximab during breastfeeding. Because abciximab is a large protein molecule with a molecular weight of 47,615, the amount in milk is likely to be very low and absorption is unlikely because it is probably destroyed in the infant's gastrointestinal tract. Until more data become available, abciximab should be used with caution during breastfeeding, especially while nursing a newborn or preterm infant. If it is used by a nursing mother, monitor the infant for bruising and bleeding.

Drug Levels

Maternal Levels. Relevant published information was not found as of the revision date.

Infant Levels. Relevant published information was not found as of the revision date.

Effects in Breastfed Infants

Relevant published information was not found as of the revision date.

Effects on Lactation and Breastmilk
