

Elotuzumab

Revised: December 3, 2018.

CASRN: 915296-00-3

Drug Levels and Effects

Summary of Use during Lactation

No information is available on the clinical use of elotuzumab during breastfeeding. Because elotuzumab is a large protein molecule with a molecular weight of 148,100, the amount in milk is likely to be very low and absorption is unlikely because it is probably destroyed in the infant's gastrointestinal tract. However, elotuzumab is administered with dexamethasone and lenalidomide, two drugs which also have no information on use in nursing mothers. The manufacturer recommends that women receiving elotuzumab should not breastfeed.

Drug Levels

Maternal Levels. Relevant published information was not found as of the revision date.
