

Alectinib

Revised: December 3, 2018.

CASRN: 1256580-46-7

Drug Levels and Effects

Summary of Use during Lactation

No information is available on the clinical use of alectinib during breastfeeding. Because alectinib is more than 99% bound to plasma proteins, the amount in milk is likely to be low. However, its half-life is about 33 hours and it might accumulate in the infant. The manufacturer recommends that breastfeeding be discontinued during alectinib therapy and for 1 week after the last dose.

Drug Levels

Maternal Levels. Relevant published information was not found as of the revision date.
