

Cobimetinib

Revised: December 3, 2018.

CASRN: 934660-93-2

Drug Levels and Effects

Summary of Use during Lactation

No information is available on the clinical use of cobimetinib during breastfeeding. Because cobimetinib is 90% bound to plasma proteins, the amount in milk is likely to be low. However, its half-life is about 44 hours and it might accumulate in the infant. The manufacturer recommends that breastfeeding be discontinued during cobimetinib therapy and for 2 weeks after the last dose.

Drug Levels

Maternal Levels. Relevant published information was not found as of the revision date.

Infant Levels. Relevant published information was not found as of the revision date.
