Idelalisib

Revised: December 3, 2018.

CASRN: 870281-82-6

Drug Levels and Effects

Summary of Use during Lactation

No information is available on the clinical use of idelalisib during breastfeeding. Because idelalisib is more than 84% bound to plasma proteins, the amount in milk is likely to be low. It is sometimes given in combination with rituximab, which may increase the risk to the infant. The manufacturer recommends that breastfeeding be discontinued during idelalisib therapy and for at least 1 month after the last dose.
