

Gefitinib

Revised: December 3, 2018.

CASRN: 184475-35-2

Drug Levels and Effects

Summary of Use during Lactation

No information is available on the clinical use of gefitinib during breastfeeding. Because gefitinib is 90% bound to plasma proteins, the amount in milk is likely to be low. However, its half-life is about 48 hours and it might accumulate in the infant. The manufacturer recommends that breastfeeding be discontinued during gefitinib therapy.

Drug Levels

Maternal Levels. Relevant published information was not found as of the revision date.
