

Vismodegib

Revised: December 3, 2018.

CASRN: 879085-55-9

Drug Levels and Effects

Summary of Use during Lactation

No information is available on the clinical use of vismodegib during breastfeeding. Because vismodegib is more than 99% bound to plasma proteins, the amount in milk is likely to be low. However, its half-life is 4 days and it might accumulate in the infant. The manufacturer recommends that breastfeeding be discontinued during vismodegib therapy and for 24 months after the final dose.

Drug Levels

Maternal Levels. Relevant published information was not found as of the revision date.
