## **Coagulation Factor X**

Revised: October 23, 2019.

CASRN: 9001-29-0

# **Drug Levels and Effects**

### Summary of Use during Lactation

No information is available on the clinical use of coagulation factor Xa during breastfeeding. Because it is a large protein molecule with a molecular weight of about 40,000, the amount in milk is likely to be very low and absorption is unlikely because it is probably destroyed in the infant's gastrointestinal tract. Until more data become available, coagulation factor X should be used with caution during breastfeeding, especially while nursing a newborn or preterm infant.

#### **Drug Levels**

Maternal Levels. Relevant published information was not found as of the revision date.

Infant Levels. Relevant published information was not found as of the revision date.

#### **Effects on Lactation and Breastmilk**

Relevant published information was not found as of the revision date.

## **Substance Identification**

#### **Substance Name**

Factor Xa (recombinant), Inactivated

#### **CAS Registry Number**

9001-29-0

### **Drug Class**

**Breast Feeding**
