

## Rosiglitazone

Revised: October 31, 2018.

CASRN: 122320-73-4

## Drug Levels and Effects

### Summary of Use during Lactation

No information is available on the clinical use of rosiglitazone during breastfeeding. Rosiglitazone is over 99% protein bound in plasma, so it is unlikely to pass into breastmilk in clinically important amounts. The manufacturer recommends avoiding breastfeeding during rosiglitazone use, so pioglitazone might be a better choice of the drugs in this class for nursing mothers.

### Drug Levels

*Maternal Levels.* Relevant published information was not found as of the revision date.

*Infant Levels.* Relevant published information was not found as of the revision date.

## Effects in Breastfed Infants

Relevant published information was not found as of the revision date.

## Effects on Lactation and Breastmilk

Relevant published information was not found as of the revision date.

## Alternate Drugs to Consider

Acarbose, Glipizide, Glyburide, Insulin, Metformin, Miglitol

## Substance Identification

### Substance Name

Rosiglitazone

### CAS Registry Number

122320-73-4

### Drug Class

Breast Feeding

Lactation

Hypoglycemic Agents

Thiazolidinediones
