

Gadoversetamide

Revised: February 28, 2019.

CASRN: 131069-91-5

Drug Levels and Effects

Summary of Use during Lactation

There is no published experience with gadoversetamide during breastfeeding. Gadoversetamide releases more free gadolinium than some other gadolinium-containing contrast agents. However, guidelines developed by several North American professional organizations state that breastfeeding need not be disrupted after a nursing mother receives a gadolinium-containing contrast medium.[1][2][3] Other agents may be preferred, especially while nursing a newborn or preterm infant.
