

## Dextromethorphan

Revised: October 31, 2018.

CASRN: 125-71-3

## Drug Levels and Effects

### Summary of Use during Lactation

Neither the excretion of dextromethorphan in milk nor its effect on breastfed infants have been studied. It is unlikely that with usual maternal doses amounts in breastmilk would harm the nursing infant, especially in infants over 2 months of age. It is best to avoid the use of products with a high alcohol content while nursing.

### Drug Levels

*Maternal Levels.* Relevant published information was not found as of the revision date.

*Infant Levels.* Relevant published information was not found as of the revision date.

## Effects in Breastfed Infants

Relevant published information was not found as of the revision date.

## Effects on Lactation and Breastmilk

Relevant published information was not found as of the revision date.

## Substance Identification

### Substance Name

Dextromethorphan

### CAS Registry Number

125-71-3

### Drug Class

Breast Feeding

Lactation

Antitussive Agents
