

Sitagliptin

Revised: February 7, 2019.

CASRN: 486460-32-6

Drug Levels and Effects

Summary of Use during Lactation

No information is available on the clinical use of sitagliptin during breastfeeding. Sitagliptin has a shorter half-life than most other dipeptidyl-peptidase IV inhibitors, so it might be a better choice among drugs in this class for nursing mothers. Monitoring of the breastfed infant's blood glucose is advisable during maternal therapy with saxagliptin.[1] However, an alternate drug may be preferred, especially while nursing a newborn or preterm infant.
