

Acetylcholine

Revised: December 3, 2018.

CASRN: 51-84-3

Drug Levels and Effects

Summary of Use during Lactation

No information is available on the use of acetylcholine ophthalmic drops during breastfeeding. Because of its short half-life, it is not likely to reach the bloodstream of the infant or cause any adverse effects in breastfed infants.

Drug Levels

Maternal Levels. Relevant published information was not found as of the revision date.

Infant Levels. Relevant published information was not found as of the revision date.

Effects in Breastfed Infants

Relevant published information was not found as of the revision date.

Effects on Lactation and Breastmilk

Relevant published information in nursing mothers was not found as of the revision date. In animals, cholinergic drugs increase oxytocin release,[1] and have variable effects on serum prolactin.[2] The prolactin level in a mother with established lactation may not affect her ability to breastfeed.
