* Low precision; no estimate reported.

LSD = lysergic acid diethylamide; PUF = public use file, which refers to estimates produced from a NSDUH public use file (a PUF is a NSDUH restricted-use file that has undergone statistical disclosure limitation treatment); RUF = restricted-use file, which refers to estimates produced from a NSDUH RUF and published in NSDUH's detailed tables available at <http://www.samhsa.gov/data/>; SE = standard error that is associated with the estimate.NOTE: Some 2007 RUF estimates and SEs may differ from previously published estimates due to updates (see Section B.3 in Appendix B of the *Results from the 2011 National Survey on Drug Use and Health: National Findings*).NOTE: $\text{Ratio of estimates} = \text{PUF estimate} \div \text{RUF estimate}$; $\text{Ratio of SEs} = \text{PUF SE} \div \text{RUF SE}$.¹ Response categories for the Perception of Risk questions include "No risk," "Slight risk," "Moderate risk," and "Great risk." The estimates in this table correspond to individuals reporting "Great risk." Respondents with unknown Perception of Risk data were excluded.² Respondents with unknown Perceived Availability data were excluded.³ Response categories for the Perceived Availability questions pertaining to the listed illicit drugs include "Probably impossible," "Very difficult," "Fairly difficult," "Fairly easy," and "Very easy." The estimates in this table correspond to individuals reporting "Fairly easy" or "Very easy."
