

TABLE 150: VIRAL LOAD \geq THRESHOLD GENOTYPE 4 TREATMENT-NAIVE: RELATIVE RISKS AND RISK DIFFERENCE FOR ALL TREATMENT COMPARISONS — RANDOM EFFECTS MODEL

TREATMENT	REFERENCE	RR (95% CRI)	RD % (95% CRL)
SOF24 + RBV24	SOF12 + RBV12	1.13 (0.79 to 1.77)	9.40 (-17.38 to 37.76)
Random effect model	Residual deviance	3.409 vs. 4 data points	
	Deviance information criteria	15.435	
Fixed effect model	Residual deviance	3.446 vs. 4 data points	
	Deviance information criteria	15.427	

CRI = credible interval; PR = pegylated interferon plus ribavirin; RBV = ribavirin; RD = risk difference; RR = relative risk; SOF = sofosbuvir; vs. = versus.

Note: Please refer to Treatment Regimen Nomenclature table for description of dosages.
